POST TEST - DISCHARGE CARE PLAN

Question: True or False?	Answer
1. Discharge care planning does not have to be completed until about a week before the resident goes back home.	
2. The resident does not need to be part of the development of the discharge plan as long as the interdisciplinary team and physician feel discharge is appropriate.	
3. Facilities need to document any referrals to local contact agencies or other entities in regards to the resident discharge.	
4. If it is determined that the resident is unable to be discharged, the facility is not required to document discharge determination.	
5. Regular re-evaluation and care plan updates are necessary with the discharge care plan.
