Overview

The defense of a healthcare organization's critical information cannot be taken lightly. According to Forbes, "Every minute, \$2,900,000 is lost to cybercrime." And according to Palo Alto Networks, "93% of healthcare organizations reported at least one security breach in the last three years."

In today's world, healthcare organizations need to have a robust cybersecurity program. This session will provide a review of a compliant cybersecurity program, as well as take a deeper dive into the framework used behind the scenes. Security vulnerabilities can happen with any organization, necessitating the need for security assessments and audits. This webinar will provide a high-level overview of the goal of a security risk assessment and answer misconceptions participants may have.

Objectives

- Discuss the basics of a cybersecurity plan
- Describe the goal of the NIST Cybersecurity Framework
- Summarize why security risk assessments are becoming mandatory in many cases

Faculty

John DiMaggio, MBA, CEO, BlueOrange Compliance

Who Should Attend?

Information Technology staff, CEOs, CIOs, Administrators, and Executive Directors at all settings

Registration and Fees

Registration fees include one registration link and access to the audio recording for the webinar. There is no limit to staff participation when using the same registration link (registration link may not be forwarded to others).
