

POST TEST FOR INFECTION CONTROL

Question: True or False?	Answer
1. If a resident is on contact precautions and they only want me to turn on a fan, it is okay if I just run in and do that without following the isolation precautions because I am not actually providing personal care.	
2. As long as I am wearing gloves, I don't always have to wash my hands.	
3. Residents with new respiratory symptoms should be provided with facemasks.	
4. I cannot work if I have infected hand lesions that may come in contact with the residents or their food.	
5. I can contract an infectious disease if I come in contact with a contaminated piece of equipment.	
6. Standard Precautions includes all body fluids, secretions, excretions EXCEPT sweat-even if they don't contain visible blood.
