Bed Rail and Bed Inspection Quiz

Question	True or False
1. The Food and Drug Administration is the entity that puts out the documentation on the seven zones of entrapment.	
2. A physical device attached to a resident's bed for turning and repositioning is never a restraint.	
3. Inappropriate placement of a bed rail would be a risk for entrapment.	
4. Toes and fingers are the most notable safety risks associated with bed rail use.	
5. If a resident can raise and lower side rails on command and without difficulty, they may not be a restraint.	
6. It is a requirement to perform periodic inspections of our beds to ensure proper application of devices and to check the seven zones of entrapment.	
7. Bed rails from another manufacturer can be used if they fit properly.	
8. Halo bars and trapezes should never be used to assist with repositioning.	
9. It is necessary to complete a risk assessment before placing bed rails on a resident's bed.	
10. It is not necessary to get a physician order for bed rails when used as a restraint.
